

# Wood burning stove Firebelly FB 1, 6 kW Melrose

## Installation project

Already the very satisfied owners of an ETA PC 25 wood pellet boiler, our clients once again turned to Border Eco Systems when wishing to replace an open fire with a wood burning stove; they were especially drawn to the Firebelly's large viewing window in the door.

The quality made, contemporary Firebelly FB 1 model generating up to 6 kW of heat was the ideal size for our customers living room.

Their project included removal of the open fire then increasing the size of the opening, renewing the hearth with Indian stone, installing the new stove and fitting an oak mantle above.

- ▶ **Stove type** Firebelly FB 1 room heater maximum output 6 kW
- ▶ **Estimated refilling periods** 1-2 hourly with well seasoned wood or wood briquettes
- Service requirements** regularly reduce volume of ash from grate, annual stove service and flue clean

## Client testimonial

I approached Neil to manage the installation of a log stove within my house. As a Construction Project Manager of 15+ years it was refreshing to work with a professional team who were enthusiastic, proactively managed works, meticulous about quality of workmanship and all for a highly competitive price. Border Eco provide fantastic aftercare: servicing, fuel supply, advice and this sets them apart from their competition.

I would not hesitate in recommending Border Eco Systems.
