

Wood burning stove

TermaTech TT10, 6 kW

Stichill

Installation project

Our client engaged Border Eco Systems to design and install the plumbing, sanitaryware, solar thermal panels, wood burning stove and mechanical ventilation heat recovery (MVHR) in their new build home in Stichill near Kelso.

The feature room of the house is the lounge with a vaulted ceiling and glass balcony. A TermaTech stove with direct air intake has been positioned on a glass hearth with matching coloured flue and flush plate to the sloping ceiling.

An elegant, quality stove with exceptional combustion, the Danish designed TermaTech TT10 has a high, curved panoramic front allowing the fire to be enjoyed from different angles.

- ▶ **Stove type** TermaTech TT10 room heater 6kW output
- ▶ **Estimated refilling periods** 1-2 hourly with well seasoned wood or wood briquettes. A little wood and often rather than overfill.
- ▶ **Service requirements** regularly reduce ash from grate, annual stove service and flue clean

Client testimonial

We are very pleased with our choice of using Border Eco Systems. Their attention to detail and preparedness to ask relevant questions in a timely manner has resulted in a high quality finish and standard of work. From the outset they were responsive to queries and any unexpected "surprises" as the overall build progressed. We were always kept informed of progress.

We have no hesitation recommending them.
