

Back boiler multi fuel stove Hunter Herald 8, 11 kW Reston

Installation project

Our client contacted Border Eco Systems to create an entire heating system for their cottage. The existing one being electric night storage heaters, which they found expensive to run and inadequate in heating performance, plus a wood burner as a room heater only.

Their choice was for a back boiler stove, opting for the multi fuel grate, to meet their hot water demands and supply heat to all the new central heating radiators we have plumbed in.

By opening up an existing fireplace we have been able to make a feature within the sitting room of the new back boiler stove; a replacement flue liner has been fitted plus an entire central heating system with radiators to distribute heat throughout the home.

- ▶ **Boiler stove type** Hunter Herald 8 central heating boiler maximum output 11 kW
- ▶ **Efficiency** 78.9%
- ▶ **Estimated refuelling periods** 4 hours for solid fuel, every 1.5 hours burning wood only
- ▶ **Service requirements** regularly empty ashpan, service stove annually, sweep flue up to twice a year

Client testimonial

Throughout the process, from Neil coming to the house to discuss what we needed until our multi-stove was finally lit and the house warmed through I cannot praise the company enough for the quality of service provided. I would recommend them unreservedly and they will always be the first port of call in the future. Great customer service and fantastic workmanship.
